OUR TAPS

Our bespoke and unique range of taps are designed exclusively for Vaniti House. Each item has been carefully tailored to represent a timeless and elegant design. You will find our Britannia range of taps in some of the most prestigious hotels around the world.

The Britannia range of tapware is manufactured in Italy and reflects a classic and clean style. With modern mechanisms, all tap heads make use of a 1/4 turn movement through internal ceramic discs. Britannia is competitively priced and offers outstanding quality and a 5 year warranty. This range is available with various handles and can be refinished in any of our bespoke finishes.

OUR FINISHES

Enhance your taps with choosing one of our bespoke finishes to enrich your design.

As we move into a new age of diversity, instilling a sense of uniqueness in our private spaces is a must for architects, designers and homeowners alike. One can refer to our bespoke finishes as 'living finishes' that develop a natural patina over time, changing as they react with the environment. Aging will occur organically on these raw, handcrafted products offering a certain appeal and charm. It is therefore important to note that no two items will be identical and each will age in their own way.

MATT BLACK

Matt black, powder-coated (40% surcharge)
Imported finish from Italy
Lead time | 8-10 weeks from date of order

AGED BRASS

Brass, aged (40% surcharge)
Lacquer | polished or matt (10% surcharge)

Lead time | 8-10 weeks from date of order

OUR HANDLES

A SELECTION OF CROSS HANDLES AND LEVERS

Select your favourite handle to accompany your Britannia body and create your own individual style of tap.

The handles use a ¼ turn movement through internal ceramic discs offering a simplistic ease of turning our tap on and off.

UNDERRIM STANDPIPES

Underrim standpipes conceal the pipe work between the bath taps and the floor. The standpipes have a straight outer sleeve that assist with connecting the standpipes to the taps. These standpipes are suitable for a bath with tapholes as they are installed underneath the rim of the bath.

Codes	Price excl. VAT
12618600	£425

DELUXE OVERRIM STANDPIPES

Inlet 22mm | **H** 645mm | **Centres** 180mm | **Plate** 250 x 100mm

OUR SHOWERS

Our beautiful range of shower mixers are made from solid brass and available in a number of special finishes - polished nickel, brushed nickel, polished brass, brushed brass, aged brass & matt black.

When deciding on a shower configuration, it is important to note that you can choose either to have an exposed version where the pipework is exposed, or a concealed unit inside the wall. You also have the choice to select a thermostatic valve. This gives you greater control of the temperature ensuring constant safety which is particularly useful when you have young children.

SUPPLIED IN BRUSHED NICKEL WITH BLACK INSETS

CARE & MAINTENANCE

Caring for your taps is not difficult but it does require regular effort should you prefer for the finish to remain in its original pristine stage. It is important to be aware that special finishes are known as 'living finishes' and over time it will develop a natural patina, changing as they react with the environment, they are in. For many, this natural ageing of the finish is the appeal and charm of choosing a special finish.

Extra care must be taken for all special finishes during installation (use soft fabric gloves to prevent natural sweat and oils from ones hands) and daily use. Normally, a damp soft cloth is all it takes to shine up your fittings, however if it is not sufficient, mix a solution of warm, soapy water with the cloth. Do not use anything stronger than a non-abrasive household cleaner (Sunlight Liquid). Never clean with abrasive solutions (Handy Andy) as these can damage your special finish.

After cleaning, be sure to dry the fittings as this will prevent water spots and any possible further damage. A tip to keeping your fittings in ideal condition is to keep a dry cloth nearby so that you can dry off the fittings after you have finished using them.

Please be aware that the majority of the special finishes are engineered by hand and each product is unique & will vary in appearance. With this being said, should you have other finishes to which you plan on matching the Vaniti House's special finishes, please consider that the metals may not be an exact match.

Please be aware that there is a lead time and additional charges for the finish.

REFRESH YOUR FINISH

A few tips on how to refresh your taps back to its original glory.

CHROME, AGED BRASS & MATT BLACK FINISH

Mix a solution of warm, soapy water (Sunlight liquid) with a cloth. After cleaning dry the fitting to prevent water spots.

POLISHED BRASS

Should it be desired that the newly polished brass look be maintained, regular polishing will be required with either Vaniti House's metal polish (code 27001001) by applying the paste onto a soft, clean cloth and rubbing the tap until the desired effect is achieved, or by using a commercial brass polishing cream such as Brasso. Be sure to remove any spillage of the metal polish on the tiles or countertop.

POLISHED NICKEL

Using a chrome polish cream give a light rub and wipe down with a clean dry cloth. Regular polishing will be required.

BRUSHED BRASS & NICKEL

Use a fine grain scotch brite pad (maroon colour) and lightly brush the item in the direction of the current brush strokes. Spray a small amount of furniture polish over and wipe down with a clean dry cloth as this will serve as a protective layer which will prevent watermarks from occurring too often.

LACQUER

Do not use metal polishes and abrasive solutions on lacquered finishes as they will remove the clear coating.

WARRANTY

Our Britannia range of taps carry a 5-year warranty against manufacturing defects. The warranty excludes defects caused directly or indirectly by misuse, poor maintenance, violence, or manipulation, in addition, it is assumed that the care instructions are followed. The warranty excludes defects caused by tarnishing, ageing or water marks. This is a natural process, and each product will develop a unique patina.
